Abstract: Objective To observe the clinical efficacy and safety of Yiqi Fumai Lyophilized Injection in the treatment of coronary heart disease with chronic heart failure (CHF) and hypotension. **Methods** A total of 90 elderly patients with coronary heart disease with chronic heart failure (CHF) and hypotension hospitalized in the Department of Traditional Chinese Medicine of the Affiliated Hospital of Guizhou Medical University from February 2018 to February 2022 were retrospectively collected as the research objects. According to different treatment schemes, they were divided into the control group and the experimental group, with 45 cases in each group. Patients in the control group only received anti heart failure treatment (including sufficient rest, oxygen inhalation, correction of arrhythmia, control of blood pressure, and maintenance of electrolytes, application β -receptor blockers, angiotensin II receptor antagonists, angiotensin converting enzyme inhibitors, etc). On the basis of the control group, the patients in experimental group were given 5.2 g of Yiqi Fumai Lyophilized Injection, dissolved in 250 mL of 5% Glucose Injection or 0.9% Sodium Chloride Injection, intravenous drip once a day, for 14 consecutive days. After 14 days of treatment the clinical efficacy of the two groups was observed, and the heart function indexes [(left ventricular ejection fraction (LVEF), N-terminal fragment of brain natriuretic peptide

(NT-proBNP), and 6-minute walk test distance (6MWD)] and blood pressure were compared between the two groups before and after treatment. The occurrence of adverse reactions in both groups during the treatment period were observed. **Results** After 14 days of treatment, the total effective rate of the experimental group was 95.56%, significantly higher than 84.44% in the control group ($P < 0.05$). There was no statistically significant difference in LVEF, NT-proBNP, and 6MWD between the two groups of patients before treatment ($P > 0.05$). After treatment, LVEF and 6MWD in both groups of patients significantly increased compared to before treatment in same group ($P < 0.05$), while NT-proBNP significantly decreased compared to before treatment in same group ($P < 0.05$). LVEF and 6MWD in the experimental group were significantly higher than those in the control group ($P < 0.05$), while NT-proBNP was significantly lower than those in the control group ($P < 0.05$). There was no statistically significant difference in average systolic and diastolic blood pressure between the two groups of patients before treatment ($P > 0.05$). After 14 days of treatment, the average systolic and diastolic blood pressure of both groups of patients significantly increased compared to before treatment in same group ($P < 0.05$), and the average systolic and diastolic blood pressure of the experimental group after treatment was significantly higher than that of the control group ($P < 0.05$). During the treatment period, the incidence of adverse reactions in the control group was 11.11%, while the incidence of adverse reactions in the experimental group was 6.67%. The difference between the two groups was statistically significant ($P < 0.05$). **Conclusion** The clinical efficacy of Yiqi Fumai Lyophilized Injection in the treatment of elderly patients with coronary heart disease complicated with CHF and hypotension is positive, and it can improve the patients' cardiac function, stabilize the pressure rise, and has high safety.

随着我国人口老龄化的加剧,冠心病、高血压发病率的增加,慢性心力衰竭(CHF)的发病率逐年上升^[1]。冠心病是我国慢性心力衰竭患者第二大危险因素^[2];CHF是因心肌收缩力减弱,导致心脏血液不能有效充分泵至全身进行循环,无法满足组织代谢需要的临床综合征^[3-4]。我国CHF住院率占同期心血管疾病的20%,死亡率达到40%,提示CHF预后较差^[5]。血压对老年冠心病合并CHF患者的临床治疗及病情的转归有重要的影响^[6-7]。心力衰竭(心衰)诊疗指南中指出β-受体阻滞剂、血管紧张素Ⅱ受体拮抗剂(ARB)、血管紧张素转化酶抑制剂(ACEI)治疗心力衰竭的重要性,对血压偏低的心衰患者,这些药物会加重低血压,成为治疗中的一个难点^[8]。老年冠心病合并CHF伴低血压患者为了纠正低血压,长时间、大剂量使用多巴胺,使其病残率和致死率均较高^[9],因此需要寻求一种治疗老年冠心病合并CHF伴低血压的安全有效的方法。中医药在心血管疾病诊疗中应用广泛,中医药在稳定病情、改善心功能、提高生存质量等方面具有独特优势。注射用益气复脉(冻干)源于经典古方生脉散,由红参、麦冬和五味子3味中药组成,临幊上主要用于治疗冠心病劳累型心绞痛及慢性心功能不全等心血管系统疾病。现代药理研究表明注射用益气复脉(冻干)具有增强心脏收缩功能、延缓心室重构、改善能量代谢、改善微循环障碍以及抗氧化等药理作用^[10]。研究还发现注射用益气复脉(冻干)通过改善心肌缺血、重构心肌细胞外基质、减少

心肌组织损伤、减少炎症因子的释放、抑制肾素-血管紧张素-醛固酮系统(RAAS)激活等作用改善心衰症状,还能预防和纠正低血压的发生^[11-12]。本研究以老年冠心病合并CHF伴低血压患者为观察对象,观察注射用益气复脉(冻干)的治疗效果及安全性,为临床合理用药提供参考。

1 资料与方法

1.1 一般资料

3 讨论

CHF是冠心病的终末阶段,因心排血量不足引起组织、器官灌注不足,产生肺或体循环瘀血,常伴随低血压、心律失常等引起的头晕、心慌、胸闷、气促等症^[18-19]。对人体健康危害最严重的心血管病症之一的CHF^[20],其发病机制为心肌损伤使交感神经系统、RAAS及内源性神经内分泌因子的兴奋性增高,促进心肌重塑^[21];加之心力衰竭使神经体液发生改变造成心脏负担加重,导致疾病恶化。阻断心肌重构是治疗心衰的关键^[22]。临幊上使用强心剂、利尿剂和血管扩张剂治疗CHF时,联合β-受体阻滞剂、ARB、ACEI等药物,有抑制激活的神经-内分泌系统^[23],改善心肌能量代谢及重建血运^[24]的作用。但这些药物治疗CHF时易引起低血压。而注射用

益气复脉(冻干)对心衰心室重构有抑制作用,还可以有效缓解和改善症状^[25-26],同时能预防和纠正低血压的发生^[11-12]。

CHF属祖国医学“心悸”“胸痹”范畴,以气阴两虚型常见,治以益气养阴、活血化瘀。注射用益气复脉(冻干)源自生脉散,红参能益气滋阴,麦冬养阴生津,益气敛阴生津,三药共奏具有益气复脉、养阴生津之效。可有效缓解气阴两虚型CHF患者头昏、心慌、胸闷、气促等症。药理研究发现,红参不仅能增强心肌收缩力、降低血管阻力、减轻心脏负荷、改善心肌细胞抗缺氧能力、保护心肌细胞的作用^[24],还能有效调节血压,且不会增加心率^[27];麦冬有稳定心肌细胞膜、正性肌力、降低心肌耗氧量、改善心肌供血、减缓心率、抑制心室重构的作用^[28];五味子有增强心肌收缩力、改善心肌缺血、抗氧化^[29-30]、提高心输出量、提升血压的作用^[31]。此外,注射用益气复脉(冻干)能加速儿茶酚胺的分泌,抑制心肌细胞Na⁺、K⁺-ATP酶活性,降低体循环阻力^[32-33];亦能促进垂体-肾上腺素分泌,增强心肌收缩能力,增加心输出量,使血压升高^[34-35];还能抑制RAS系统和炎症因子的过度激活,改善心衰症状和升高血压,从而改善治疗CHF药物的低血压不良反应^[11-12]。

本研究结果表明,注射用益气复脉(冻干)联合ACEI、ARB等药物治疗老年冠心病合并CHF伴低血压患者,不仅能改善患者心衰症状及心功能,还能预防化学药引起的低血压不良反应,具有安全性可靠、疗效确切、升压平稳的作用。
